

ABSTRACT OF THE DISCLOSURE

The Reusable Soap Bar Insert is a device to be utilized with specially configured bars of bathing soap and is designed to help reduce soap waste. The new concept of this invention is that it is a non-disposable item that may be used again and again in new bars of soap, throughout soap usage. The soap would be manufactured with a hole through its length that is shaped to accommodate the Reusable Soap Bar Insert. Prior to using the bar of soap the user pushes the reusable insert into the pre-manufactured hole, where it stays until the soap is depleted. An optional lanyard may be attached to hang or handle the bar of soap more conveniently.
